

Hi,

The application has 3 pages, one for login, one for registering, one for home (after redirected from login)

We have used firebase authentication to store user details as shown below

The screenshot shows the Firebase Authentication console for a project named 'icp5'. The 'Users' tab is selected, displaying a table of registered users. The table has columns for Identifier, Providers, Created, Signed In, and User UID. There are three users listed, all with email providers. The 'Add user' button is visible in the top right of the table area.

Identifier	Providers	Created	Signed In	User UID
admin1@gmail.com	📧	Mar 3, 2019	Mar 3, 2019	YWL1I1D6hqMnxXmaRcsnWbb6b...
admin2@gmail.com	📧	Mar 3, 2019	Mar 3, 2019	v3O6X65TpmfN0chlV865AQKiUue2
admin@gmail.com	📧	Feb 28, 2019	Mar 3, 2019	vH68qUFEophorNbNuu3b5LifGUd2

please find how thw three pages appear immediately afterredirecting to them

Please find the code in the src module are the screenshots placed in the repository.

here the user will be first redirected to login page when the application starts, once he enters the correct credentials he can be successfully redirected to home page. If any user wants to create new account, they have to navigate to Register page by clicking on fab icon in the bottom.

After the user logs in, a camera button is displayed in the bottom of home page, which enables the users to take pictures and display them in the same page.

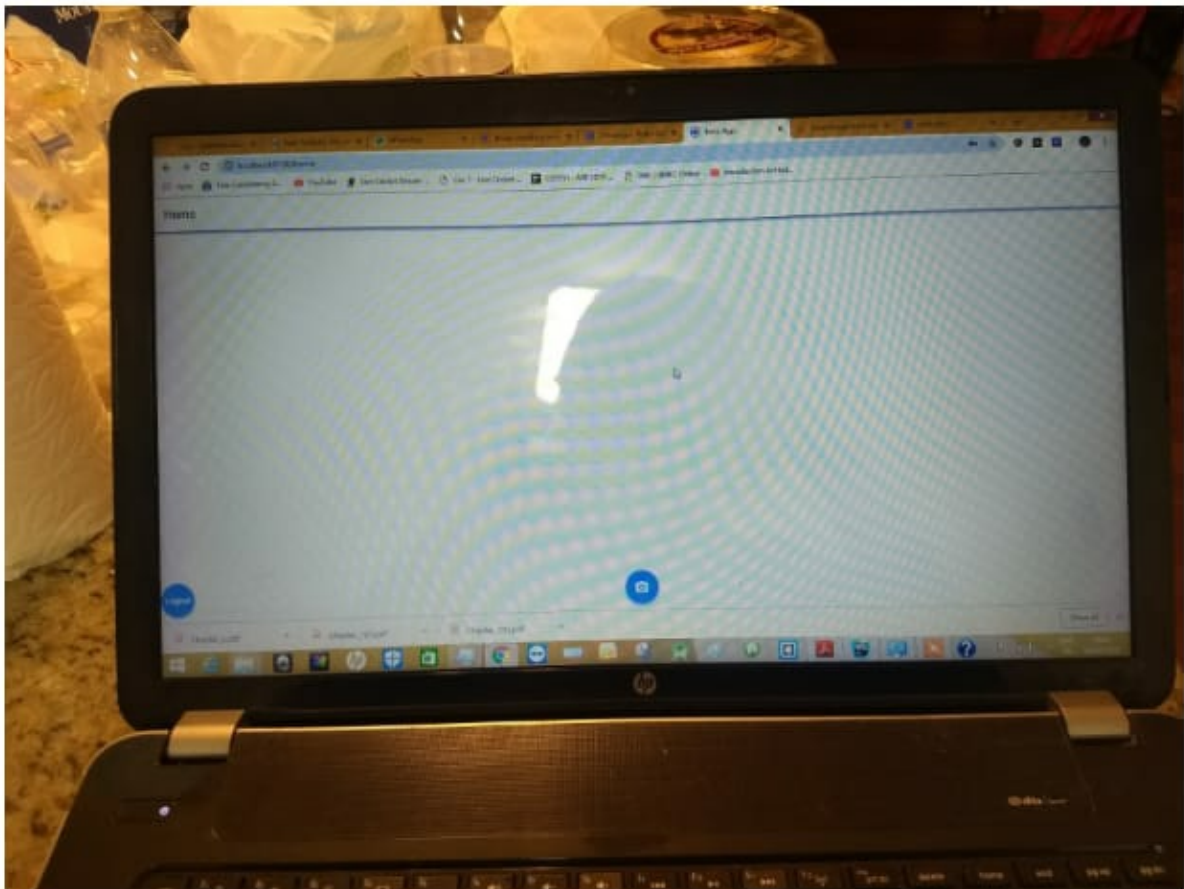

Here we have used camera cordova plugin and we have successfully built and deployed our ionic app into android mobile.

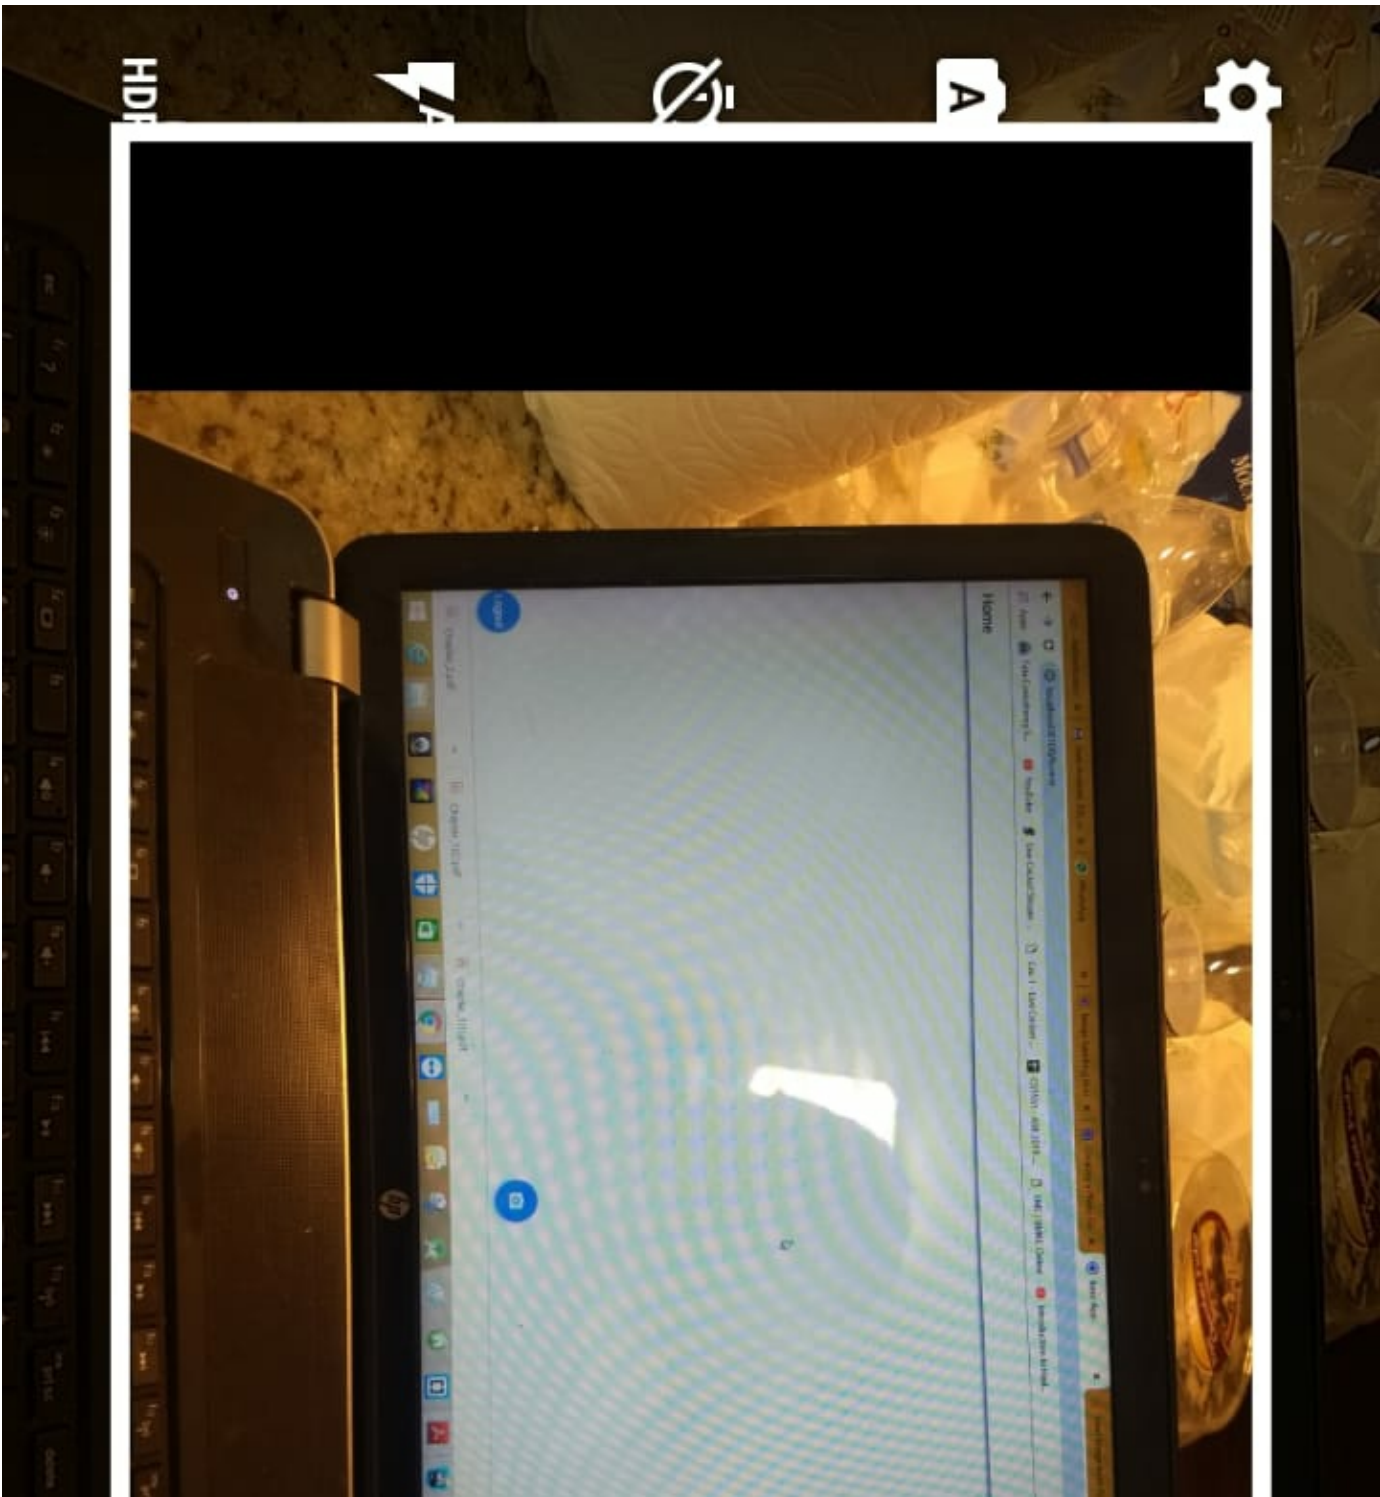

Please find the screenshots of working of application in android. The last picture shows that we are able to display the pic taken in home
